MID:g440300 PIDN:AAA36807.1; PID:g4440801 Kuang, W.J.: Goeddel, D.V.: Ferrara, N.

growth factor is a secreted angiogenic mitogen.

œ

```
As Description, promotes thaid and protein leakage from blood vessels.

Observants: aftermative splitning analogues(s) dimer, disn'tide bead, extracellular profile products aftermative splitning by all payons of 27 products spredicted. V22 Priling Products as the observance of the products of estatus products products.

Priling 2002 27 Products analog of observations of the products of estatus products of the products of estatus products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         J. They can also be used to modulate myelopoiesis, e.g. treating granulocytopenia. They can also be used for modulating the growth of endothelial cells. They can also be used for stimulate lymphocyte production and maturation, and to promote or inhibit trafficking of leucocytes between tissues and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The vascular endothedial growth factor C (VEGE-C) polypeptides have activities affecting growth and migration of vascular endothedial cells, promoting growth of lymphatic endothedial cells and lymphatic vessels, increasing vascular permeability, and affecting myelopolesis. The products can be used for stimulating anglogomeses, for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oedema, granulocytopenia or for wound healing or tissue transplantation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This polypoptide sequence comprises mouse VEGF-C, a novel ligand that binds specifically to the FI14 receptor tyrosine kinase (VEGFE-4), stimulating phosphorylation of the receptor, and which modulates the growth of endothelial cells. The sequence was deduced from a cPNA clene (AATB4277) obtained from 12 day mouse or the country of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              embryonal cDNA library, and shows a high degree of homology to novel, claimed human VEGF-C (see AAW009-1) and to avian (quail) vHGF-C (see AAW00934). Recombinant mouse VEGF-C holypoptides can be produced that correspond to non-human mammalian variants of VEGF-C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 35; Page 121-122; 183pp; English

                                                                                         9
                                                                                                                                                                                               This polypeptide comprises a human foetal liver kinase I binding protein (tlk lbp) (see AAW17837) that binds to the receptor tyrosine kinase Ilk-le expressed on vascular endothelial and other cells. The mature flk1-bp can be secreted from host cells transformed with an expression vector including an isolated flk-lbp cNA clone (see AAT58811). Flk-lbp can be used to isolate cells to which it binds, for use in studying the roles of such cells and or flk-lb or vasculoweresis and angiogenesis. Angiogenesis inhibition or use in studying the roles of such cells and or flk-lb or increased vascularisation may be clinically desirable (e.g. to suppress solid tumour growth or in wound healing, respectively). The flk-lbp can be administered to treat conditions with defective or insufficient flk-l. Polypeptides may also act as carriers to deliver diagnostic/therapouricy spents to cells to which flk1-bp binds, to generate antibodies, and to identity flk-lbp antaqunists of useful for treating flk-lbp mediated conditions.

                                                                                                                                                      acids encoding the truncated VRP subunits are used to produce the truncated proteins recombinantly. The truncated VRP subunits, optionally expressed from dene therapy vectors, have in vivo and in vitro angiogenic activity and are used to stimulate angiogenesis, particularly coronary colluteral vessel development in cases of cardiac isobarmia; to stimulate endothelial cell growth and migration in vitro; to treat heart disease; to treat isobarmia (e.g.cardiac, chronic coronary or chronic lower limb isobarmia; stroke and peripheral vascular disease); to promote healing of
                                                                                                                                                                                                                                                                                                                                                       This represents the amino acid sequence of human vascular endothelial growth factor (VEGF)-C protein. The invention provides truncated VEP (VEGF related protein) subunits that have at least one amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     recombinant: truncated; described therapy anglogenesis; cardiac ischaemia; coronary; collateral vessel development, cell drowth; migration; heart; lower limb ischaemia; stroke; peripheral vascular disease; intestine; wound healing; skin; vascular permeability.

Conditions associated with lymphoedema include Milroy Nonne syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the protein sequence for the buman vascular endothelial growth factor C (PRGF C). It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (PESFR 5).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening a human subject for increased risk of developing a lymphatic disorder, comprises assaying a nucleic acid to determine a mutation altering the sequence of a vascular endothelial growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

binding of ligand proteins to ims like tyrosine kinase 4 receptor Treating neoplastic diseases such as lymphoma, carcinomas, melanomas and surcomas, involves administering a compound capable of inhibiting

Example 15-17; Page 140-142; 148pp; English

tor manufacturing medicament useful for diagnostic screening, imaging and treatment of malignancies characterised by FIT4-exprossing blood cells. The FIT4 gene maps to chromosomal region 5q35 and is expressed as 5.8 kb and 4.5 kb mRNAs which differ in their 3' sequences and are differentially expressed in HEL and DAMI cell lines, FIT4 belongs to a subtamily of class III receptor tyrosine kinases (RTKs). It is used as a target for tumour imaging and anti-tumour therapy. The present sequence is a human prepro-vascular endothelial growth tactor C (VECF-C), a specific example of FIT4 binding compound. endothelial cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas method involves administering a compound that inhibits binding of a ligand to Flt4 thereby inhibiting flt4 mediated proliferation of vascular The patent discloses a method to treat neoplastic disease characterised by expression of the like bytesine kinase 4 (F104) receptor (aiso referred as vascular epositical growth factor receptor 3, VESCE-3) in and sarromas. Fir4 receptor tyrosine kinase binding compounds can be used endothelial cells of blood vessels adjacent to malignant neoplasm.

VREP-C has the ability to stimulate re-endothedialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulation of smooth muscle coll proliferation. It can bind to and stimulate VESTR 2 (viscular endothedial growth factor receptor) and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used in a method to reduce or prevent restenosis and stenosis of a blood messel following gascular trauma e.g., cardiovascular surgery and perculanceous transfominal coronary analophasty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VEHER 3 phosphorylation in cells that express such receptors. An anti-restenosis agent comprising either a VEHE-C gene or protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Preventing stemosis and restemosis in mammals using vascular endothelial growth tactor proteins or the nucleic acids encoding them
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preprinted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25
A human vascular endothelial growth factor (VEGF)-related protein (VFGF) (AAMI 083) has been identified that binds to, and stimulates the phosphorylation of, the receptor tyrosine Kinase F144. It is postulated to be a third member of the VEGF protein family. Its amino acid sequence was deduced from a cDNA clone (AAT59929) obtd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human protein similar to vascular endothelial growth factor to treat e.g. wounds, tumours, rheumatoid arthritis, Kaposi's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     from a glieba SKI library. Eccembinant VRF can be produced in transformed host cells and used: to promote growth of vascular and jupb calculation. Acts, to stimulate phosphorylation of the tyrosine kinase domain of a Fit4 receptor as a diagnostic; as an additive to cell cultures to series for (act) agonts and to relie to cell cultures to series for (act) agont and to
                                                                                                                                                                                                                                                                                                    loukoryte adhesion deficioncy syndrome: lymphopenia:

The etiology of these immune deficiencies of disorders may be genetic, somalic, such as cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                blood pressure, and increase blood flow. The polynucleotides and polypoptides can be used for preventing, treating or ameliorating a medical condition. The VESE 2 polypoptides or polynucleotides may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents vascular endothedial growth tactor-2 (MSF 2). The MSF 2 polypoptides have activities similar to MSF. The MSF 2 polypoptides have activities similar codothelial cells, stimulate the growth of vascular endothelial cells, stimulate endothelial cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NULL OS TANK

The isolated polypeptide is useful for stimulating analogoussis, by promoting the proliferation of endothelial cells, for the treatment of a wound, or for the treatment of tissue or bone damage.
